Germain **Potet**

AI engineering student at Polytech Paris-Saclay, seeking a 6-month end-of-studies internship in AI/Data starting March 2027

germainlepotet@gmail.com | **GitHub** gege2108

PROFESSIONAL EXPERIENCE

AI Research Engineer Intern | **University of Technology Sydney (UTS)** April – August 2026

- **Object detection:** Configured and fine-tuned a Faster R-CNN model for optic disc detection in patients with papilledema, achieving 96.7% sensitivity and 98.37% precision.
- **Model benchmarking:** Evaluated deep learning architectures (ResNet + LSTM, 3D-CNN with EVM) on medical imaging data.
- **Data pipelines:** Applied data augmentation techniques (sliding window, geometric transformations) for video micro-movement analysis.

Technical Assistant Intern | **New Imaging Technologies (infrared cameras)** June 2023

- Worked in a clean room environment, testing and inspecting electronic components.

Computer Science Tutor for first-year undergraduate students 2024 – 2025

EDUCATION

2026 – **University of Porto**, Machine Learning and Agentic AI
2024 – **Polytech Paris-Saclay**, Engineering degree (MSc), Computer Science & Applied Mathematics
2022 – 2024 **Polytech Sorbonne**, Bachelor's degree in Mathematics – Integrated preparatory program (PEIP)

SKILLS AND PROJECTS

Clustering Project in Python

- Benchmarked clustering methods using machine learning models (k-means, DBSCAN) and deep learning models (GMM, ResNet, ViT) on food data. Deployed a performance comparison dashboard with Docker.

Social Reproduction in Europe – Data Pipeline & Visualization

- Designed a pipeline to clean and harmonize heterogeneous multi-source data (Eurostat, OECD) with Python and Pandas (DataFrame manipulation). Developed an interactive data visualization notebook to analyze socio-economic disparities across Europe.

PolySteam – Video Game Platform Clone

- Developed a platform for publishing and launching video games. Handled data streams with Kafka between several independent applications written in Java and Kotlin, using Avro data schemas.

GrandTheftAutoEcole – Interactive 3D Rendering Engine (C++ / OpenGL)

- Built a real-time 3D scene with a scene graph (parent–child node hierarchy) and dynamic camera control. Manually implemented mesh handling with VBO/IBO, the Phong lighting model (ambient, diffuse, specular), texture mapping and shaders using OpenGL, GLM and GLFW.
